

Table 4-2. CalSim 3 Naming Convention for Channel Arcs and Nodes

Prefix	Channel Name	Prefix	Channel Name
Sacramento River Hydrologic Region			
ABN	Auburn Ravine	JCK	Jack Slough
ABT	Auburn Tunnel	KRT	Kelly Ridge Tunnel/Powerhouse
AMR	American River	KLR	Knights Landing Ridge Cut
ANT	Antelope Creek	LBC	Lower Boardman Canal
BCC	Big Chico Creek	LBR	Little Bear River
BCN	Berar Creek (North)	LCC	Little Chico Creek
BEC	Bear River Canal	LDC	Little Dry Creek
BGD	Biggs-West Gridley Drain	LVP	Los Vaqueros Pipeline
BRC	Bear Creek (tributary to Cache Creek)	MLC	Mill Creek
BRR	Bear River	MNS	Minor north-east streams
BSL	Butte Slough	MRM	Mormon Ravine
BTC	Butte Creek	MTC	M&T and Llano Seco Canal
BTL	Battle Creek	NBA	North Bay Aqueduct
CBC	Combie Ophir Canal	NFC	North Fork Cache Creek
CBD	Colusa Basin Drain	OMR	Old and Middle River
CCC	Contra Costa Canal	ORP	Old River Pipeline
CCH	Cache Creek	OWC	Oroville-Wyandotte Canal
CCK	Coon Creek	PSC	Putah South Canal
CCT	Clear Creek Tunnel	PTH	Putah Creek
CLR	Clear Creek	PYN	Paynes Creek
CMT	Camptonville Tunnel	RFS	Return Flow Split
COW	Cow Creek	RSL	Rock Slough
CRC	Natomas Cross Canal	RVC	Richvale Canal
CRK	Cherokee Canal	SAC	Sacramento River
CSL	Cache Slough	SBP	Sutter Bypass
CST	Cresta Tunnel/Powerhouse	SCR	Secret Ravine
CWD	Cottonwood Creek	SCW	South Fork Cottonwood Creek
CYN	Canyon Creek	SEC	Sutter Extension Canal
DCK	Dry Creek (tributary to Natomas East Main Drain)	SPT	Spring Creek Tunnel
DER	Deer Creek (tributary to Yuba River)	SSL	Sacramento Slough
DHC	Dry and Hutchinson Creek	STH	South Canal
DRC	Deer Creek	STN	Stony Creek
DRM	Drum Canal	TAB	Thermalito Afterbay release
ELD	Elder Creek	TCC	Tehama-Colusa Canal
EMD	Natomas East Main Drain Canal	THM	Thomes Creek
ENF	East Branch of North Fork Feather River	TRN	Trinity River
ESL	Edgar Slough	WEC	Western Canal
FSC	Folsom South Canal	WLF	Wolf Creek
FTR	Feather River	WSB	Willow Slough Bypass
GCC	Glenn-Colusa Canal	WSE	Wise Canal
HON	Honcut Creek	WWC	Wadsworth Canal
ISF	Isolated Facility	YBP	Yolo Bypass
JBC	Joint Board Canal	YUB	Yuba River

Table 4-2. CalSim 3 Naming Convention for Channel Arcs and Nodes (contd.)

Prefix	Channel Name	Prefix	Channel Name
Upper Feather River Watershed			
BGC	Big Grizzly Creek	LST	Lost Creek
BTN	Belden Tunnel/Penstock/Powerhouse	MFF	Middle Fork Feather River
BUK	Bucks Creek	MIO	Miocene Canal
BVT	Butt Valley Tunnel/Penstock/Powerhouse	NFF	North Fork Feather River
CRB	Caribou Penstock/Powerhouse	NLL	North Channel Little Last Chance Creek
CST	Cresta Tunnel//Penstock/Powerhouse	POE	Poe Tunnel//Penstock/Powerhouse
EBF	East Branch Feather River	RCT	Rock Creek Tunnel/Penstock/Powerhouse
FPT	Forbestown Tunnel//Penstock/Powerhouse	SCT	Slate Creek Diversion Tunnel
GFT	Grizzly Forebay Tunnel/Penstock/Powerhouse	SFF	South Fork Feather River
GRT	Grizzly Tunnel//Penstock/Powerhouse	SFT	South Fork Tunnel
GZL	Grizzly Creek	TTC	Toadtown Canal
HKC	Hendricks Canal	WBF	West Branch Feather River
LLC	Little Last Chance Creek	WPT	Woodleaf Tunnel/Penstock/Powerhouse
Yuba River Watershed			
BSC	Bowman-Spaulding Conduit	MFY	Middle (Fork) Yuba River
CCS	Canyon Creek (South)	NFY	North (Fork) Yuba River
CGT	Colgate Penstock/Powerhouse	OGN	Oregon Creek
CSD	Cascade Canal	SFD	South Fork Deer Creek
DER	Deer Creek (tributary to Yuba River)	SFY	South (Fork) Yuba River
FDC	(French) Dry Creek	SLT	Slate Creek
FDC	Fordyce Creek	SYC	South Yuba Canal
LRT	Lohman Ridge Tunnel	TFR	Texas, Fall, and Rucker Creeks
MBT	Milton Bowman Tunnel		
Bear River Watershed (also see under Sacramento Valley)			
CPF	Chicago Park Flume	DFF	Dutch Flat Penstock/Powerhouse
Upper American River Watershed			
ALD	Alder Creek	NLC	North Fork Long Canyon Creek
BLT	Buck-Loon Tunnel	NMA	North Fork of Middle Fork American River
BSH	Bush Creek	NNA	North Branch North Fork American River
CMN	Camino Tunnel/Penstock/Powerhouse	OXB	Oxbow Penstock/Powerhouse
CPC	Caples Creek	OYS	Oyster Creek
CYN	Canyon Creek	PLC	Pilot Creek
DCC	Duncan Creek	PLM	Plum Creek
EDC	El Dorado Canal	PYR	Pyramid Creek
EDP	El Dorado Penstock/Powerhouse	RCK	Rock Creek
ELC	Echo Lake Conduit	RLT	Ralston Tunnel/Penstock/Powerhouse
FMT	French Meadows Tunnel	RPT	Robbs Peak Tunnel/Penstock/Powerhouse
GRL	Gerle Creek	RRT	Rubicon-Rockbound Tunnel
IHT	Jones Fork Tunnel/Penstock/Powerhouse	RUB	Rubicon River
JBT	Jaybird Tunnel/Penstock/Powerhouse	SCT	SF Long Canyon Creek Diversion Tunnel
LLT	Loon Lake Tunnel/Penstock/Powerhouse	SFA	South Fork American River
LNG	Long Canyon Creek	SFR	South Fork Rubicon River
LRB	Little Rubicon River	SLC	South Fork Long Canyon Creek

Table 4-2. CalSim 3 Naming Convention for Channel Arcs and Nodes (contd.)

Prefix	Channel Name	Prefix	Channel Name
LVC	Lake Valley Canal	SLF	Silver Fork American River
MFA	Middle Fork American River	SLV	Silver Creek
MFT	Middle Fork Tunnel	SSV	South Fork Silver Creek
NCT	NF Long Canyon Creek Diversion Tunnel	WBR	Weber Creek
NFA	North Fork American River	WRT	White Rock Tunnel/Penstock/Powerhouse
San Joaquin River Hydrologic Region			
ASL	Ash Slough	LJC	Littlejohns Creek
BCK	Bear Creek (tributary to Eastside Bypass)	LPC	Little Panoche Creek
BRS	Berenda Slough	MCD	Merced River
BUR	Burns Creek	MDC	Madera Canal
CAA	California Aqueduct	MDS	Modesto Canal
CHW	Chowchilla River	MOK	Mokelumne River
CLV	Calaveras River	MPS	Mariposa Creek
COT	Cottonwood Creek (trib. to Eastside Bypass)	MRS	Merced River Slough
CMP	Camp Creek	MSH	Marsh Creek
CSM	Cosumnes River	MSN	Mud Slough (North)
DBC	Dry and Berenda Creeks	MSS	Mud Slough (South)
DCM	Dry Creek (tributary to Merced River)	NFC	North Fork Cosumnes River
DCT	Dry Creek (tributary to Tuolumne River)	NMW	Newman Wasteway
DED	Deadman Creek	OAK	Oakdale Canal
DEE	Deer Creek (tributary to Cosumnes River)	ORT	Orestimba Creek
DMC	Delta-Mendota Canal	OWN	Owens Creek
DPC	Del Puerto Creek	QNT	Quinto Creek
DSC	Dry Creek (tributary of Mokelumne River)	SAL	Salado Creek
EBP	Eastside Bypass	SDC	Stockton Diverting Canal
ESC	Eastside Canal	SJR	San Joaquin River
FBW	Firebaugh Wasteway	SLD	San Luis Drain
FCS	French Camp Slough	SLO	Salado Creek
FRS	Fresno River	SSJ	South San Joaquin Canal
FSL	Fresno Slough	STS	Stanislaus River
GRZ	Garzas Creek	TUO	Tuolumne River
ING	Hospital and Ingham Creeks	TUR	Turlock Canal
JBP	James Bypass	UFC	Upper Farmington Canal
LBN	Los Banos Creek	XCC	Outside and Main Canals
Upper Stanislaus River			
ANG	Angels Creek	MFS	Middle Fork Stanislaus
BVC	Beaver Creek	MIL	Mills Creek
BVT	Beaver Creek Tunnel	NFS	North Fork Stanislaus
CFS	Clark Fork of Stanislaus River	SDT	South Fork Stanislaus Diversion Tunnel
CVT	Collierville Tunnel	PHP	Philadelphia Canal
DPH	Donnell Penstock and Powerhouse	SFS	South Fork Stanislaus River
HGL	Highland Creek	SPH	Stanislaus Tunnel
JWS	JW Southern Penstock and Powerplant	UTC	Utica Canal

Table 4-2. CalSim 3 Naming Convention for Channel Arcs and Nodes (contd.)

Prefix	Channel Name	Prefix	Channel Name
Upper Mokelumne River Watershed			
BCM	Bear Creek (Mokelumne)	MFM	Middle Fork Mokelumne River
BRT	Bear River Tunnel	NFM	North Fork Mokelumne River
BRV	Bear River	SFM	South Fork Mokelumne River
COL	Cole Creek	TGC	Tiger Creek
ELT	Electra Tunnel	TGR	Tiger Creek Canal/Conduit
Upper Tuolumne River Watershed			
CHY	Cherry Creek	MFT	Middle Fork Tuolumne River
CVY	Clavey Creek	MNT	Mountain Tunnel
ECT	Eleanor-Cherry Tunnel	MOC	Moccasin Creek
ELN	Eleanor Creek	NFT	North Fork Tuolumne River
JWB	Jawbone Creek	SFT	South Fork Tuolumne River
LCA	Lower Cherry Aqueduct		

The point of measurement or “zero” mile is established at either the upstream or downstream end of a channel, according to the point of greatest channel definition. For natural rivers and streams, distances are measured upstream from the point of discharge into another body of water. For example, RM 0.00 for the American River marks the river’s confluence with the Sacramento River. RM 0.0 for the Sacramento River marks the river’s confluence with the San Joaquin River downstream from Browns Island at New York Slough. For canals, MP 0.00 occurs at the head of the canal, at the point of diversion. For example, MP 0.00 for the California Aqueduct is at the outlet from Clifton Court Forebay. For drains, like rivers, measurement is upstream from the point of discharge. For example, MP 0.00 for the Colusa Basin Drain is downstream from the Knights Landing Outfall Gates at the drain’s confluence with the Sacramento River.

To facilitate modeling of groundwater, which is based on the C2VSim, the CalSim 3 streamflow network contains a node for each of the streamflow nodes in C2VSim’s streamflow network. These nodes are associated with stream-groundwater interaction, and the associated CalSim 3 code defines groundwater inflows to the stream system as simulated by CalSim 3’s groundwater module. Chapter 15 (Groundwater) explains the processes governing the CalSim 3 surface water interaction with groundwater.

As indicated in the example below, not every node (or conveyance arc) in CalSim 3 can be referenced back to C2VSim. Additional nodes and arcs were created in CalSim 3 to better represent points of diversion and flow regulation and location of return flows. Groundwater inflow to the stream system only occurs at stream nodes with corresponding C2VSim stream nodes.⁴ On the CalSim 3 schematic, groundwater inflow to nodes is indicated by an incoming gray arc. The inflow arcs are labeled using the two-letter prefix “SG” and a three-digit C2VSim stream node number, followed by the receiving node name and the corresponding C2VSim stream reach number (e.g., SG230_SAC247_39).

⁴ Additional seepage arcs have been created for some canal systems where there is significant recharge to the underlying groundwater.
